ProX XT-GSWSB Ground Support Stabilizing T-Base for LED Wall Stacking for F32 and 12-inch Bolt Truss Segments

Description

ProX XT-GSWSB Ground Support **Stabilizing T-Base for LED Wall Stacking** is ideal when you need a base that takes up a minimal amount of storage and cargo space. This allows easy and quick setup for LED panel walls, saving time and effort rather than most conventional and cumbersome mounting stands. This Ground Support T-Base **supports a single F32 or 12-inch bolt on the I-Beam Truss Segment** that can be mounted to the center of the base. **Each Ground Support T-Base can be linked with multiple units to support lengthier LED stage setups.**

The Ground Support Base is rugged and indestructible made from steel materials. Each T-Base is equipped with three height-adjustable leveling feet (that can be removed) when you want to bolt the hardware into the floor for permanent installations. This base can be supported by [XT-TC5LEDPA](#) and [XT-SC8LEDPA](#) Telescoping LED Wall Panel Pole Clamps (*Sold Separately*).

DISCLAIMER: It's recommended that they be weighted down at the rear of the base as a safety measure to prevent accidents. Truss, clamps, video panels, and any other third-party products shown are for display purposes only and are not included.
