ProX XSQ-1624MK2 Set of (4) Telescoping Stage Legs with Ball Joint Adjusts from 16 to 24 inches compatible with ProX StageQ™ Platforms

Description

ProX **XSQ-1624MK2 Set of (4) Telescoping Stage Legs** with Ball Joint **Adjusts from 16 to 24 inches** compatible with ProX StageQ™ Platforms. The ProX XSQ-1624MK2 is a (4)-pack of Adjustable Telescoping Stage Legs for XSQ Staging, ranging from 16 to 24 inches and extendable to 16 inches. These legs are manufactured with 2" tubing to fit in the StageQ™ platform pockets.

All ProX XSQ portable stage decks are elevated or supported by either our standard fixed-height aluminum stage legs or our adjustable multi-height aluminum stage legs. Both styles of legs are manufactured from 2" aluminum tubing. Additionally, the adjustable legs have a larger diameter tube that fits outside the inner pipe for adjusting the height. The legs have a steel pin to secure the adjusting system and come with safety clips tethered on a stainless-steel cable to prevent loss.

These adjustable legs offer good support and strength at an affordable price point. The legs come standard with a 2-inch adjustable screw foot for fine leveling. There is a black rubber pad on the bottom to prevent marring or scratching any floor surface, including gym floors. StageQ™ portable stage decks use four legs for each section.

Adjustable stage legs are most often used in outdoor applications on uneven terrain to quickly level your portable stage. They are also used indoors or on level surfaces, providing the flexibility of having multiple heights while owning just one set of legs. Adjustable legs include an outer and an inner leg, along with a pin and screw foot for adjusting.

The inner leg that fits inside your leg socket is made from the same exact size pipe as our standard fixed-height legs. The outer pipe is the one that slides up and down for adjusting and has holes every 2", along with a 2" screw foot for fine leveling. Additionally, each leg features a ball joint at the feet for ground leveling.
